## IP-CONSOLE-GH Direct Dial Setup with Informacast Fusion

#### **Create Phantom IP Speakers**

- 1. In InformaCast click on Recipients then IP Speakers
- 2. Click the + on the top right corner to add a new speaker once the window opens give it phantom extension, name, and description.
- 3. Enter a phantom Mac address, it must be 12 digits. An example would be 00000001234. Using the 1234 as the phantom extension.
- 4. Click Enable SIP Intercom. In the speaker DN place any unique number as it will not be used.
- 5. The DN to Dial will be either the extension of the Dialcast group or extension of another speaker setup to for a two-way call.
- 6. Hit Save.
- 7. Repeat for EACH DialCast and IP Speaker that requires Intercom (2-way Audio).

Q Search Menu	×		
A Hame		Create IP Speakers @ Add a registered IP speaker to InformaCast; u	ntil IP speakers are added to informuCast, it can see them, but they cannot be included in device groups or receive notifications.

# IP-CONSOLE-GH Direct Dial Setup with Informacast Fusion

### Setting up Speed Dial on the IP-CONSOLE-GH

- 1. Log into the Console via the web UI.
- 2. Click on Function key in the left side submenu.
- 3. In a DSS Key field select Type and click Memory Key.
- 4. Next give it a Description then in the value field put the extension number in for the Dialcast or two-way intercom call you setup in InformaCast.
- 5. Select subtype and choose speed dial. On the line field, select the line that is registered to InformaCast.
- 6. Leave Media as default. Click apply.
- 7. There will now be a speed dial button on the IP-CONSOLE-GH screen using the action you defined.
