## Firmware Release Notes

IPX Firmware Release Version 1.0.10

Released 04.01.19

We are continuously making improvements to our IPX speaker features and firmware.

Release version 1.0.10 contains the following updates. **Note:** Please refer to the Read Me file in 1.0.10 when upgrading to version 1.0.10 for any devices that have firmware version 1.0.7.0 or 1.0.8.0.

- Allow changes to which audio is played based on input trigger
- NTP, SIP and static RTP routes to be disabled by default
- Set relay output based on priority of InformaCast Messages
- Connect to InformaCast server based on configured static server URL
- Allow using TCP for the SIP transport
- InformaCast full duplex SIP calls
- Network Capture Files
- Ability to configure range of MultiCast addresses to pre-join via IGMP
- Ability to set time through InfomaCast
- WebUI Improvements
- Bug fixes

Once the firmware is downloaded

1. Log into the WebUI via the IP address of the speaker
2. Go to Administration tab  
User Name: admin  
Password: admin
3. Go to Firmware Settings
4. Choose File
5. Speaker will automatically update to the latest firmware and reboot.
