IPS-SIS
SIP Strobe
Supporting Voice Mailbox Message
Waiting Indication
Description

The wall-mounted IPS-SIS SIP Strobe operates as a visual alerting device. The device can be set up as part of a ring group (call group) with the Strobe engaged as notification of incoming calls.

The IPS-SIS may also be activated by being part of a multicast group. When audio is detected on a specific Multicast address and port, the strobe will activate.

Through a web page setup, you can have the IPS-SIS respond to message waiting signals by blinking. When the message has been heard, the strobe stops blinking.

User selectable scenes for blink rate and brightness for each of the activation modes.

Users may also use AtlasIED’s HTTP command set to directly access the strobe’s functions.
