## ISOFLARE™ SERIES

FS PREMIUM SURFACE MOUNT LOUDSPEAKERS

Dante®

The IsoFlare™ FS is a wide bandwidth, high sensitivity surface mount loudspeaker designed for the ultimate in fidelity, coverage, and aesthetics. The IsoFlare™ FS range is the new benchmark in point source technology for prestigious commercial environments. Decades of experience from acoustic and mechanical engineers specializing in this technology have honed existing skills, complemented with the very latest in design & engineering techniques to bring IsoFlare™ to the premium commercial space in an integrated package.

### FEATURES/BENEFITS

#### Proprietary IsoFlare™ Driver Technology

Point source technology where low and high frequency drivers share a common center providing outstanding stereo imaging. Even off axis, energy is radiated isotropically with constant directivity, following the flare of the driver cone.

#### Premium Crossover Components

The highest grade components such as low loss LF laminated core inductors, non-inductive thick film resistors, and HF polypropylene capacitors provides highly transparent signal transfer for more accurate sound reproduction and increased durability.

#### PoE++ and Dante Enabled

Unlike traditional PoE loudspeakers, which compromise on headroom and dynamic range due to power limitations, FC-D models leverage PoE++ to unlock the loudspeaker's full performance potential via a single network cable.

#### Full Bandwidth Low Insertion Loss Transformer

70/100V transformer offers improved audio fidelity by minimizing signal degradation. This ensures accurate reproduction of sound across the entire frequency spectrum resulting in enhanced clarity and detail.

#### Mounting Options

Wide range of mounting options for even the most challenging spaces.

#### All Weather

All-weather and UV rated for premium indoor and outdoor performance.
